IT-004 — Hardware Issuance, Repair, and Replacement SOP

Document control

Field	Value
Document ID	IT-004
Title	Hardware Issuance, Repair, and Replacement SOP
Version	3.0
Owner	IT Asset Management
Approver	Director, IT Operations
Effective date	March 14, 2025
Review cycle	Annual
Audience	Service Desk, IT Operations, all workforce members
Classification	Internal

1. Purpose

Defines how ABC CORP issues, repairs, replaces, and retires laptops, desktops, monitors, peripherals, and mobile devices, including the Service Desk steps for handling hardware tickets.

2. Scope

Covers all end-user computing hardware owned or leased by ABC CORP, including:

- Laptops and desktops
- Monitors and docking stations
- Keyboards, mice, and headsets issued as standard peripherals
- Mobile phones issued under the corporate plan
- Loaner devices from the office pool

Out of scope: servers, network equipment, data center hardware (Infrastructure Operations), conference room A/V equipment (FA-002), and print devices (FA-003).

3. Device standards

The current standard laptop for staff is the 14-inch business class laptop with 16 GB RAM and 512 GB SSD. Engineering and design roles receive the performance configuration (32 GB RAM, 1 TB SSD) as defined by their department head. Monitors standardize at 27-inch QHD. Peripheral standards are on the IT intranet page and are updated when models change.

Devices are refreshed on a four-year cycle. Refresh does not happen automatically — the user is contacted at the four-year mark and a replacement is scheduled.

4. New issuance

For new hires:

1. HR Operations confirms the hire and start date through the nightly feed.
2. IT Asset Management reserves a device from inventory, images it with the standard build, and enrolls it in device management.
3. Device is available for pickup at the employee's assigned office on or before the start date, or shipped for remote hires two business days before start date.
4. Service Desk confirms delivery or pickup with the new hire and their manager.
5. Asset is assigned to the user in the asset register.

For existing staff requesting an additional device: manager approval is required; issuance depends on inventory and role justification.

Decision points during new-hire issuance:

- If the hire is within 48 hours and no imaged device is available, issue from the loaner pool and swap later.
- If the hire's role requires a performance configuration and none is in stock, issue standard and place an order with a stated lead time.
- If the hire will work exclusively from a personal device under a BYOD arrangement, document the BYOD arrangement and skip hardware issuance.

5. Repair

1. User reports the issue through the Service Desk.
2. Agent troubleshoots to confirm the issue is hardware-related. Software issues do not follow this procedure.
3. Agent creates a hardware ticket, records the asset tag, and offers a loaner if the device is unusable and the user has an in-office presence or can receive a shipment.
4. Device is collected and shipped to the authorized repair vendor if under warranty, or repaired in-house if the issue is a common field-replaceable part (battery, keyboard, power adapter).
5. Target turnaround: three business days for field-replaceable parts, seven business days for vendor repair.
6. Device is returned, verified, and the ticket closed.

Loaner devices are issued from the pool at each office and must be returned within 14 days. Loaners are wiped upon return. Loaners are not eligible for VPN-required work until the user has completed enrollment — the Service Desk handles enrollment at handoff.

6. Replacement

A device qualifies for replacement when any one of the following applies:

- It has reached the four-year refresh cycle
- Repair cost exceeds 60% of replacement value
- It has had three or more repairs in 12 months
- The model no longer receives vendor security updates

Replacement is not automatic on request. The Service Desk confirms eligibility against the asset register and processes the request.

If the device does not qualify for replacement, the Service Desk explains the criteria that were not met and offers a repair path. If the user's manager believes an exception is warranted, the manager submits the exception with justification, which IT Asset Management reviews.

7. Lost, stolen, or damaged devices

1. User reports through the Service Desk immediately. For theft, the user must also file a police report in their jurisdiction.
2. Service Desk logs the incident and notifies Information Security — for stolen devices, this triggers a remote wipe.
3. Remote wipe is executed if the device is enrolled in device management and has checked in within the last 30 days.
4. Replacement follows Section 6. Damaged devices may incur a cost recovery charge per the employee handbook.

If a device has not checked in within 30 days, remote wipe cannot be executed. In this case, the incident is escalated to Information Security for additional controls — typically credential rotation for the user and review of any files stored locally on the device.

8. Retirement and disposal

Devices removed from service are returned to IT Asset Management. Storage is sanitized to the standard defined in SE-001 before disposal or resale. Disposal certificates are retained per RC-001.

Devices past their useful life but still functional may be repurposed as loaners or donated under the corporate sustainability program.

9. Service Desk handling checklist

- ☐ Confirm caller identity
- ☐ Record asset tag
- ☐ Confirm issue type: repair, replacement, lost/stolen, new issuance
- ☐ For lost/stolen, notify Information Security within 1 hour
- ☐ Offer loaner where applicable
- ☐ Set expectations on turnaround
- ☐ Log everything in the ticket
