SD-003 — Service Catalog and Request Fulfillment

Document control

Field	Value
Document ID	SD-003
Title	Service Catalog and Request Fulfillment
Version	3.2
Owner	Service Catalog Manager
Approver	Director, IT Operations
Effective date	March 14, 2025
Review cycle	Annual
Audience	Service Desk, IT Operations, all requesters
Classification	Internal

1. What the service catalog is

The service catalog lists every request a workforce member can submit and receive a standard outcome. Each catalog item defines:

- What the request is
- Who can request it
- What the approval path is
- What the service level is
- What the cost is (where applicable)

Requests not in the catalog require a ticket to the Service Desk rather than a catalog submission. Both paths are valid — the catalog is for standard items, tickets for everything else.

2. Catalog items and service levels

Catalog item	Approval	Delivery target
New user account	Manager	2 business days
Password reset	None (identity verification)	Same day
MFA reset	None (identity verification)	Same day
VPN access	Manager	1 business day
Software install — approved	None	1 business day
Software install — exception	Manager, IT, Security	10 business days
Hardware — standard laptop	Manager	5 business days
Hardware — peripheral	None	2 business days
Shared mailbox	Manager and data owner	2 business days
Distribution list	Manager	1 business day
Meeting room booking	None	Instant
Badge replacement	None	1 business day
Visitor pre-registration	None	Instant
Leave request	Manager	Instant submission, manager response in 2 business days
Benefits enrollment — new hire	None	30-day window
Expense submission	Manager	5 business days to approval
Purchase requisition	Per FI-002	Per FI-002
Travel booking	Per FI-004	Per FI-004

3. Request fulfillment

Standard items — the catalog system routes the request through the approval path and to the fulfilling team automatically. No ticket needed.

Non-standard requests — submit a ticket through the Service Desk. The agent determines the correct handling path.

Urgent requests — if the standard service level does not meet the business need, request expedited handling through the Service Desk and provide the business justification. Expedite is not guaranteed.

4. VPN access — session limits

VPN sessions are configured with the following limits:

Setting	Value
Session timeout	12 hours
Idle timeout	30 minutes
Concurrent sessions	2

Session timeout changes are not a catalog item. Requests to change session timeouts for individual users are not approved — the timeout is set by policy for security reasons.

5. Requestor responsibilities

- Submit complete requests — incomplete requests are returned
- Provide business justification where required
- Respond to approver questions within 2 business days
- Do not escalate a request before its service level has elapsed
- Do not submit duplicate requests for the same item

6. Approver responsibilities

- Respond within the target for the item
- Approve only what is necessary
- Document any conditions or time limits
- Do not approve requests outside their authority

7. What is NOT in the catalog

The following are handled through tickets, not the catalog:

- Incidents (anything broken)
- Change requests (anything that modifies a production system)
- Exceptions to policy
- Access requests outside the standard profiles
- Vendor onboarding
- Any request where the outcome is unclear

8. Catalog changes

The catalog is reviewed quarterly. New items are proposed through the Service Catalog Manager. Requests for new catalog items are evaluated against:

- Volume of related tickets
- Standardization of the outcome
- Feasibility of an automated approval path
- Security review requirements

Approved additions appear in the next quarterly release.
